

PROCESS TO UPDATE KNG MAIL SERVER PARAMETERS

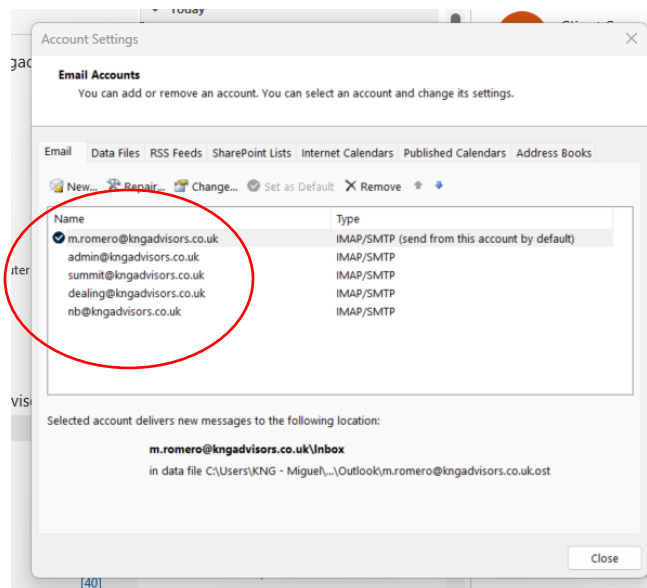

Greetings,

We have updated our Email server. *So we ask that you update your configuration*.

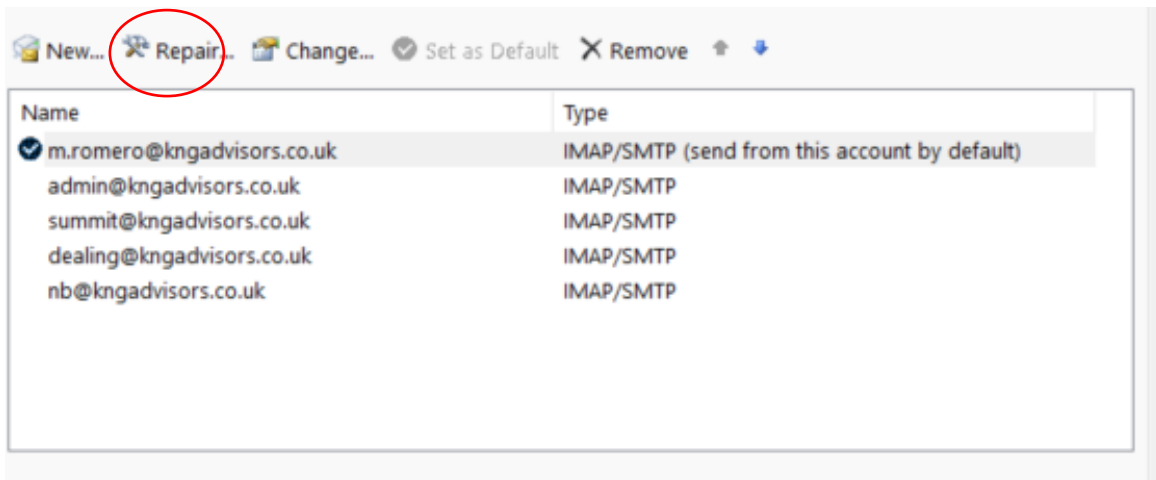

From your email application, click File and then *Account Settings*:

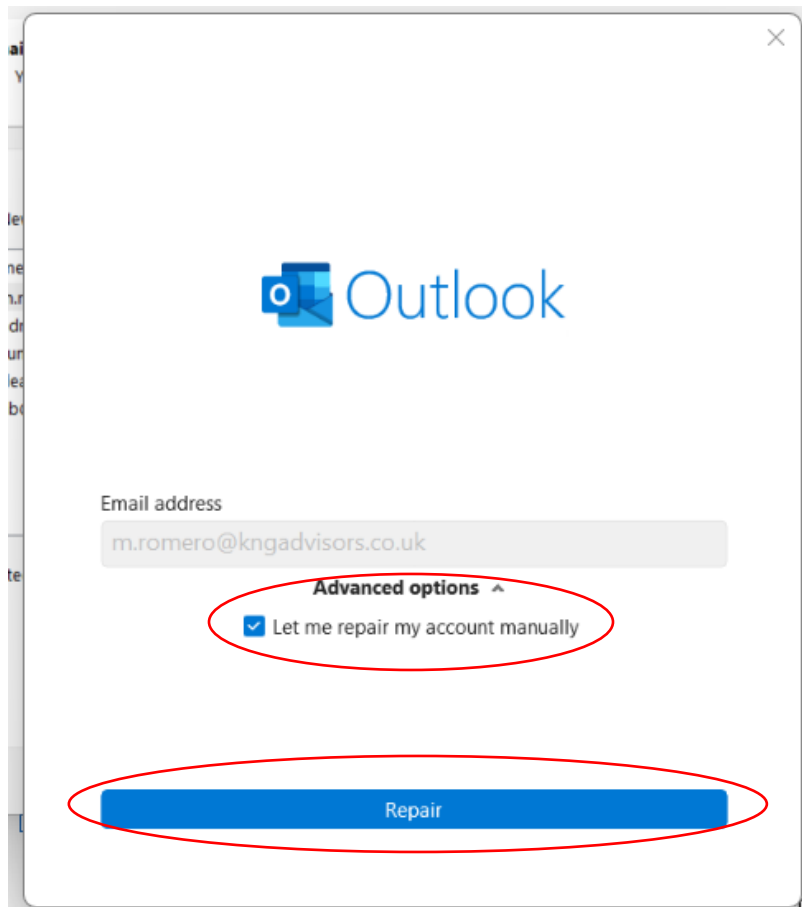

Then click on the email account to configure:

Then click the *Repair* button

An Outlook window will appear indicating the email account to Repair, click on Advanced Options and check the option. Let Me repair my account manually and then click repair:

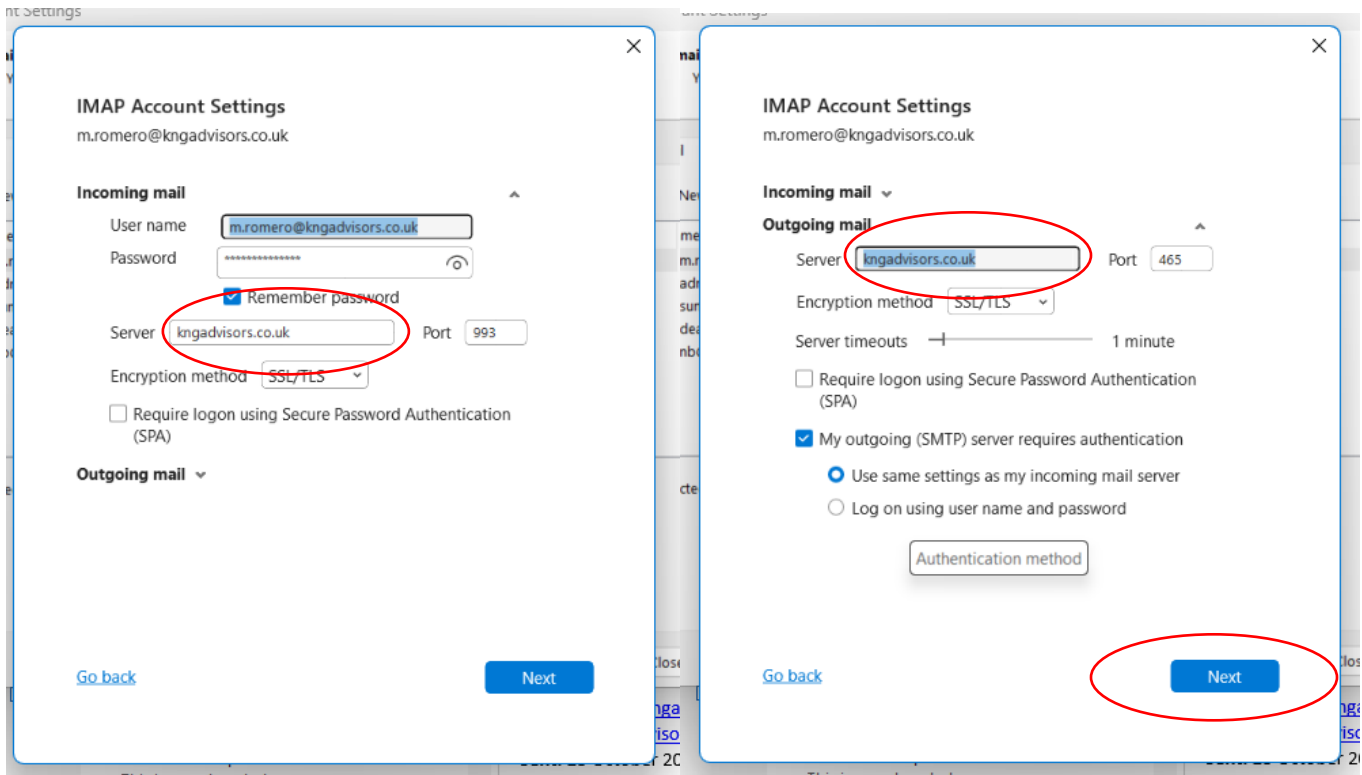

Then we update the input and output server:

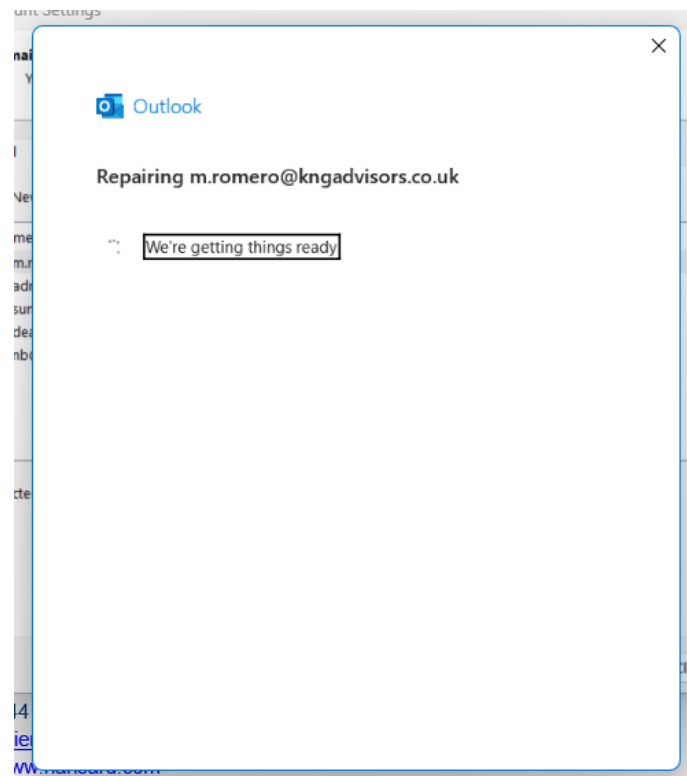

In: kngadvisors.co.uk

Out: kngadvisors.co.uk

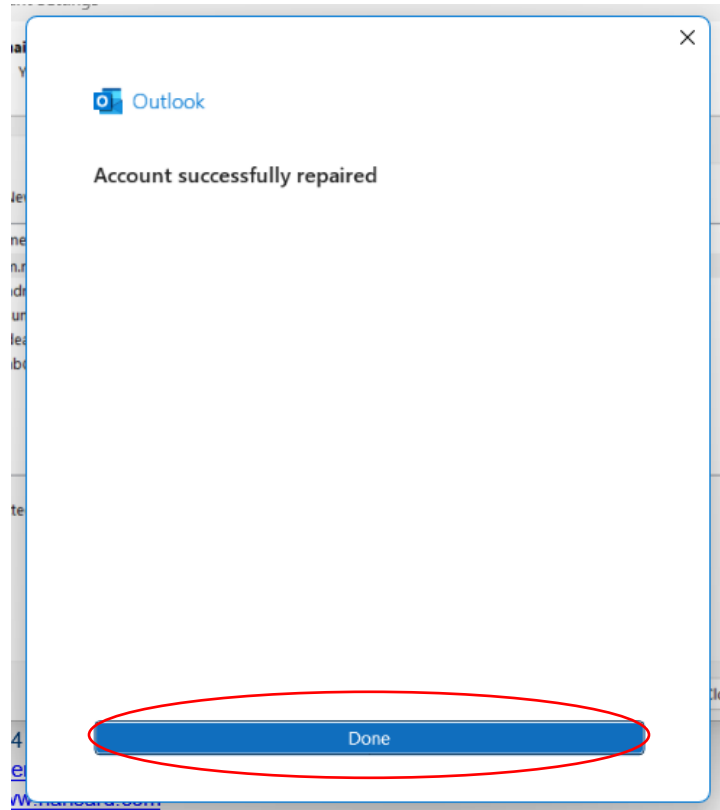

They only have to update the server, the other parameters remain the same.

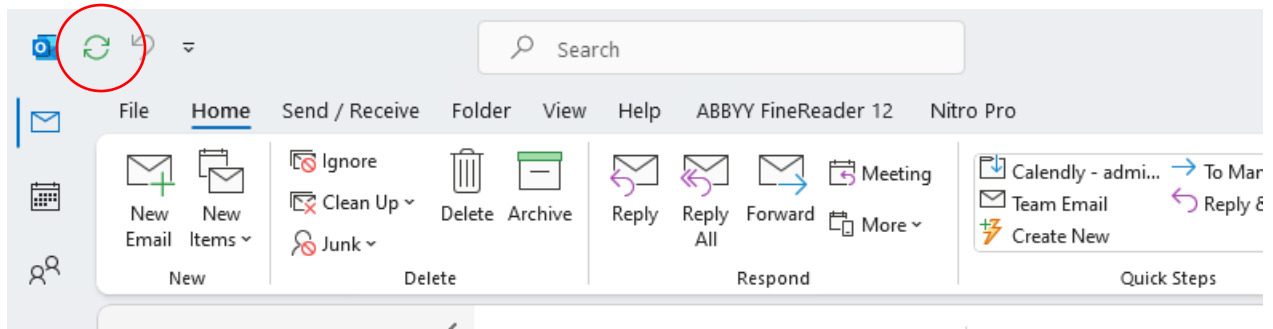

Click Next and wait for the configuration to finish:

When it is finished, a message like this will appear indicating that the repair has completed successfully and then we click **DONATE:**

Now you must update your mailbox in this button located in the upper left bar of the program window of mail:

Ready, your KNG email has been updated.
